MXCuBE status at Elettra (XRD2 beamline)

MXCuBE Status Report - XRD2

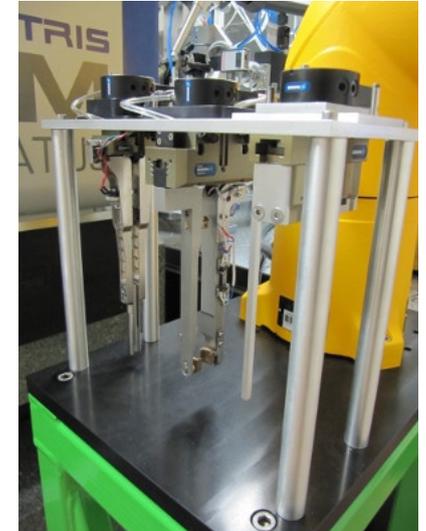

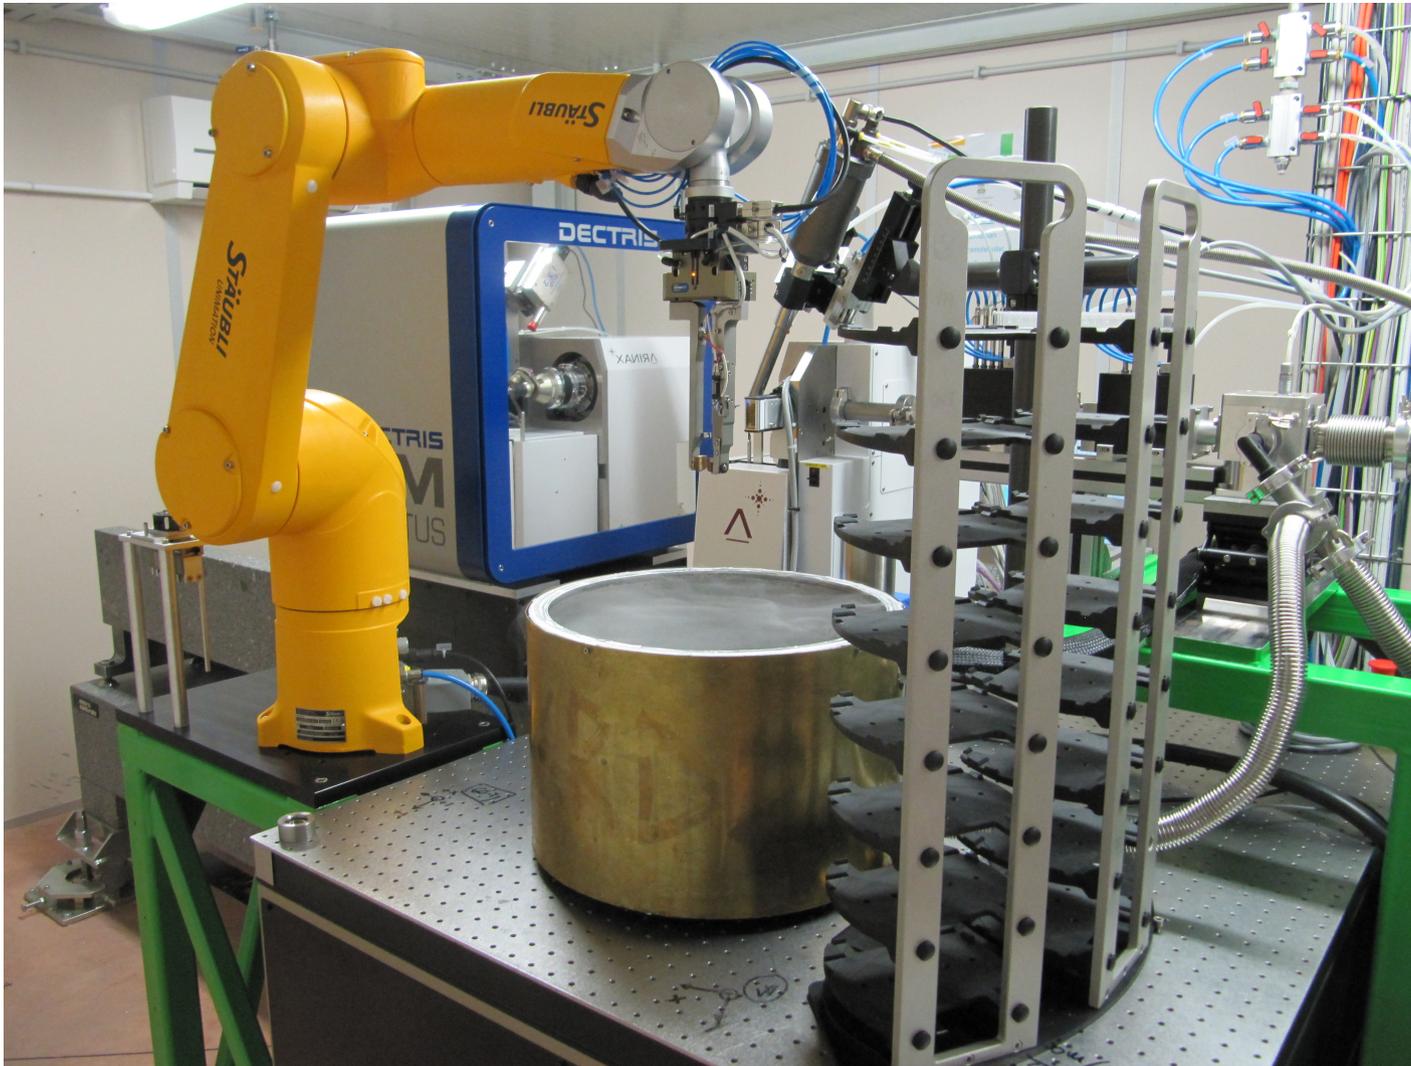

MEASURED flux (@13keV) = 2.2×10^{13} ph/sec (3×10^{13})

Mono bandpass (@13keV) < 4eV

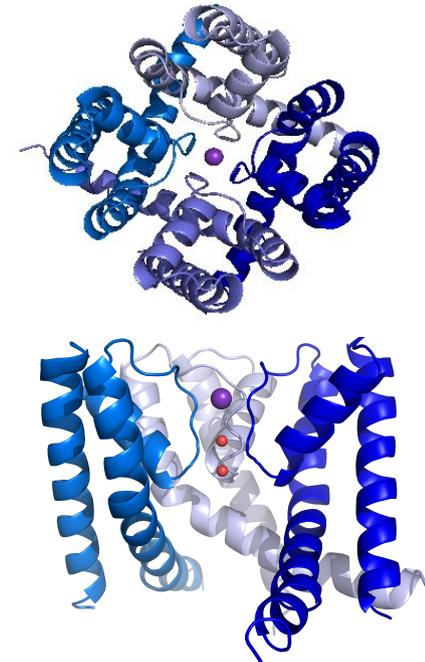

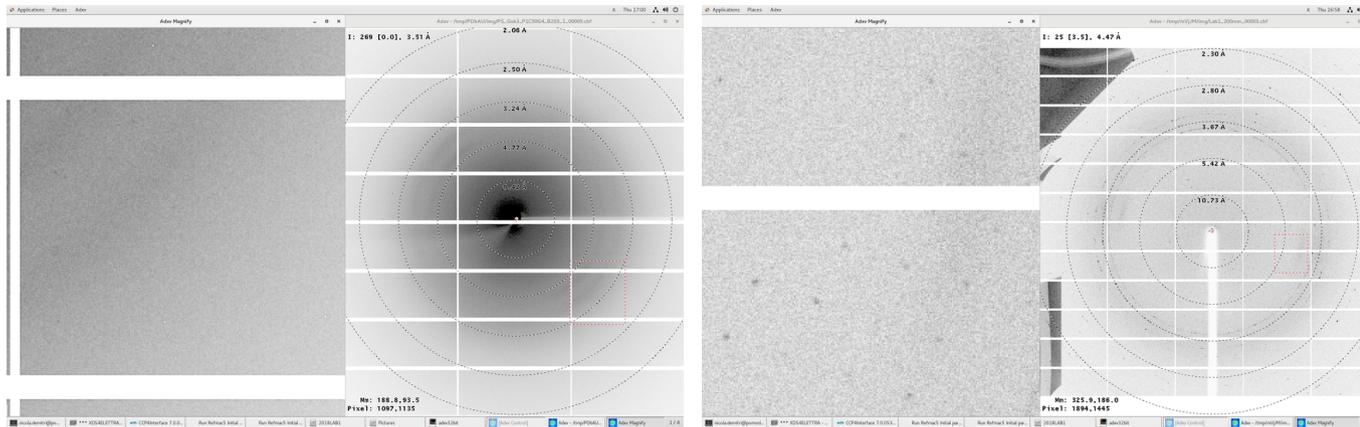

Spectrum from 7.5 keV to > 30 keV

2

MXCuBE Status Report – Exp. Setup

Initial test using a real-life, poorly diffracting crystal (80x50x10 micron³)- GSK-3.

SUBSET OF INTENSITY DATA WITH SIGNAL/NOISE >= -3.0 AS FUNCTION OF RESOLUTION

RESOLUTION	NUMBER OF REFLECTIONS	COMPLETENESS	R-FACTOR	R-FACTOR COMPARED	I/SIGMA	R _{int}							
9.72	2994	2277	2338	97.4%	5.2%	5.4%	1434	9.09	7.4%	98.8*	23*	0.909	317

Bacterial CNG-mimicking chimera channel

Cell parameters: 181.32, 135.26, 67.50 – 90, 87.9, 90 (C2) Resolution: 47.79-3.2 (3.37-3.2) R_{sym} or R_{merge}: 0.15 (0.35)
I over sigma 4 (3.4) Refinement R_w/R_{free} 0.30/0.35 **Deposited in Protein Data Bank: 6FIZ**

Glycogen synthase kinase 3 (GSK-3) phosphorylates more than 100 different substrates and is involved in a great number of cellular pathways. It has a role in glycogen metabolism and is now getting notorious for being considered as target for Alzheimer disease.

Cyclic Nucleotide Gated (CNG) channels are nonselective cation channels playing a key role in visual and olfactory transduction

- ✓ MXCuBE 3 installed (*minimal* configuration), **in use** with our initial, friendly users
- ✓ Login with user/proposals credentials (linked to VUO)
- ✓ MD2-SC coordination, 3 click centering, *simple* data collections, few “actions” implemented
- ✓ Data collected download-able *via* VUO

The screenshot shows a slide titled "MXCuBE 3 installation" with the Elettra Sincrotrone Trieste logo. It contains a list of "MxCube3 current status:" items:

- Login : still **mockup** with test proposal;
- Data Collection Tab:
 - Machine Status: controlled via **Tango**
 - Beamline Valves and shutters: controlled via **Tango**
 - Detector Distance: controlled via **Tango**
 - Beamline Actions: still **mockup**
 - Energy, Wavelength, Resolution, Transmission, Cryo, Flux: still **mockup**
 - Diffractometer (MD2):
 - Motors: controlled via **Tango**
 - Phase Control: still **mockup**
 - Aperture Control: still **mockup**
 - Lights: controlled via **Tango**
 - Zoom: controlled via **Tango**
 - Camera: using MD2 JPG via **Tango**
 - 3 Click centring: using MD2 command via **Tango**
 - Automatic centring: **not** yet implemented
- Sample Changer Tab:
 - XRD2 sample changer under test
 - **created** SampleChangerElettra Hardware Object for simulation
- Sample Overview Tab:
 - ISPyB: **not** yet installed
 - Tab content **correctly** synchronized with SampleChanger Tab Info
 - Implemented only Data Collection Task
 - MultiCollectTangoMD2 hw object **communicates** with MD2 and Pilatus Tango devices
 - First tests of **queued** data collections

4

- ✓ Sample changer OK for SPINE pucks, under test for UNIPUCK, under development for crystallization PLATES and Test-Samples
- ✓ Set-Up of disk space and computing power: sw installed in *local* Pilatus PPU and in a computer cluster:
Cluster of 16 servers, 252 cores @ 3GHz and 128 GB RAM each (2TB total), Tesla supercomputing machines with nVidia K80 boards (total of almost 5000 CUDA cores) with 480 GB/sec bandwidth.
- ✓ ISPyB/EXI missing: we are working on files describing the dewars content (users are supposed to upload them together with dewars tracking number now) – VUO integration
- ✓ No remote access yet.

MXCuBE Status Report – Next

- ✓ System debug in order to offer a minimal but robust beamline (deadline: the onset of ESRF upgrade program)
- ✓ XRD1 MX users are invited to collect data at XRD2.
A common XRD1 and XRD2 call, based on a monthly evaluation and continuous submission already running
- ✓ Link MXCuBE with ISPyB/EXI
- ✓ ...
